SECUENCE OF 160-374 FROM N.A.
STRAIN-Isolate 50410;
Patki A.H., Dale J.W.;
Patki A.H., Dale J.W.;
Submitted (APR-1991) to the EMBL/GenBank/DDBJ databases.
-: SIMILARITY: Belongs to the mycobacterial PPE family.
-: CAUTION: In strain Oshkosh the gene for this protein is interrupted in position 307 by an IS6110 element.
-: CAUTION: Was originally (Ref.3) thought to be a dihydrofolate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   11.2%; Score 338; DB 1; Length 434; 27.2%; Pred. SUBCELLULAR LOCATION: Membrane-bound (Potential).

Inductron: Induced by heat shock during exponential growth and by heterologous amylases at the transition phase of the growth cycle. Negatively regulates its own expression.

NESCELLAMBOUS: Inactivation results in compensating overexpression of http. especially during stress conditions.

SIMILARITY: Conclains 1 PDZ/DHR domain.

CAUTION: Ref.2 and Ref.3 sequences differ from that shown due to frameshifts in positions 87 and 246 that produce two separate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                326 LSVPQAWAAANQAVTPAARALPLTSLTSAAERGPGQMLGGL-PVGQMGARAGGGLS-GVL

A; Description: Isolation and characterisation of a 34KDa protein of Mycobacterium paratul A; Reference number: 847170
A; Reference number: 847170
A; Status: preliminary
A; Molecule type: DNA
A; Residues: 1-361 < CCAM>A; Residues: 1-361 < CCAM>A; Cross-references: EMBL: Z23092; NID: 9505550; PIDN: CAA80638.1; PID: 9505551
C; Superfamily: Escherichia coli trypsin-like proteinase degS; GLGF domain homology; tryps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            P.R.; Hor
